From Earthquake Reconstruction towards Sustainable Cities and Regions in the Post COVID-19 Era

1 - 7 September 2022

Partnerships between public sector and non-profit organizations: a virtuous bottom-up model for post-earthquake sustainable revitalization

Karina Zabrodina, PhD Student
karina.zabrodina@unicam.it

Research topic and goal

Analysis of public-private partnerships between local actors involved in reconstruction as strategic tools for the regeneration and enhancement of the territory

Integration between green goals and valorization activities through the different forms of collaboration between public and non-profit organizations

What are the characteristics of the non-profit sector in Italy?

- solidarity and social utility activities performed in the general interest of the community
- multiple legal forms for setting up a non-profit organization (e.g.: social enterprises, cooperatives, associations, foundations)
- organizational form based on open and voluntary participation with democratic governance
- possibility of reconciling social objectives with economic activities to ensure financial self-sufficiency of the organization
- flexibility of the bylaw that can be enriched with specific clauses to regulate in a transparent way the activities for the benefit of the territory

How can non-profit organizations collaborate with public bodies for the economic, social, cultural and environmental revitalization of the territory?

Social Impact Bonds

This collaborative instrument allows to create social impact partnerships between public bodies, private investors and non-profit organisations which, through a network of agreements, can simultaneously generate savings in public expenditure, a return proportional to the social objectives achieved for private investors and especially the active commitment of the whole community in the satisfaction of social needs

Renewable energy communities

Non-profit models, when combined with energy communities, promote the achievement of energy sustainability objectives and at the same time take on the role of alternative financing tools for economic, social and cultural regeneration. The prohibition of the distribution of the profits and their mandatory use exclusively for energy community's purposes allow in fact to imagine an intelligent use of the profits (deriving from the sale of the energy in excess) through the involvement of all local, public and private, actors

Co-programming and co-planning with local authorities

This type of collaboration is based on joint identification of the social needs, interventions and resources needed and the elaboration and implementation of the projects for their satisfaction

The research project is entirely funded by Intesa SanPaolo Foundation
